

Printing, Finally on Your Side.

Xerox® Workplace Suite is a comprehensive print management solution that works where you work.

On-site, Your Server

Xerox® Workplace Suite is a complete print management and mobility platform designed for secure, private deployment on a server or within your own cloud environment. License it as either a mobility solution or a print management solution, or both, and select the features that best meet your needs.

AUTHENTICATION AND ACCESS CONTROL

Unlock your printer, securely release pull print jobs, and access multifunctional printer (MFP) applications with a variety of flexible authentication methods:

- Card-based Reader Authentication: The flexible card-based reader works with a wide range of industry-standard secure readers and cards
- Mobile Authentication: Use any Near-Field communication (NFC), QR code, or device code via our Xerox® Workplace App to authenticate effortlessly from your mobile device
- Alternative Authentication Options: Choose to log in using a PIN, confirmation number, or using your username and password
- Active Directory Support: Integrate with Microsoft® Active Directory for enhanced user management

PULL PRINTING

To ensure your confidential documents are not left unattended on the printer output tray for others to see, use our secure single queue to submit your print jobs from any PC or mobile device. After authenticating at your chosen network printer, you can view, adjust settings, print, or delete your jobs as necessary.

SINGLE SIGN-ON (SSO)

Make use of our single sign-on capability to access your SSO-enabled apps. Conveniently authenticate at the printer once and then securely access all your MFP SSO-enabled apps without having to remember long passwords or perform any additional, time-consuming login steps.

To ensure peace of mind, all credentials are kept safe using login tokens stored and retrieved using triple encryption within a tamper-proof software vault.

ACCOUNTING, REPORTING, AND RULES

Administrators can establish access control and print rules while closely monitoring printing across the organization through our consolidated fleet reporting and accounting capabilities. You'll receive job-based reporting for printing, faxing, copying, and scanning, along with monthly usage reporting available with on-premises installations. Xerox® Workplace Suite also integrates with Network Accounting.

Key features include:

- Enabling job quotas to limit print volume by users by day, week or month
- The ability to use project codes or departments for rebilling purposes
- The option to schedule and send email reports directly to your inbox to simplify account and reporting

COMPLETE SECURE AND SIMPLE MOBILE PRINT

Xerox® Workplace Solutions provide a seamless experience across the full ecosystem of operating systems, even with complex network configurations. This allows users to submit print jobs over the local network or via the internet from remote locations without the need for IT support, significantly increasing productivity for everyone.

- Provides native desktop printing (file > print) with Windows®, Chromebooks, and Mac® OS, a Windows desktop client for a server light implementation, avoiding high print server traffic.
- Choose between direct print or pull print options to suit your security protocols and business requirements.
- Simplify job submission by sending your print jobs via email, making it convenient for guest users as well.
- The Xerox® Workplace App enables native printing for iOS, Android, and Microsoft Surface tablets¹, delivering a simple, unified experience that is easy to use and easier to manage. It also allows users to geolocate the closest printer in the vicinity using GPS.
- Jobs submitted from mobile devices are converted on the server to prevent against image loss.
- Initiate direct MFP scanning from your mobile device using the Xerox® Workplace App for a personalized touch.

Wherever you work, there's a Workplace Solution for you. Xerox® Workplace Suite gives you the option to keep everything within your network, while Xerox® Workplace Cloud offers the flexibility to work across multiple networks and locations.

CONTENT SECURITY

Our Content Security feature safeguards against the loss of data or intellectual property by searching all documents—copied, scanned, or printed—through a licensed MFP for specific user-defined terms or text strings (e.g., confidential, internal use only, etc.). If a match is detected, an alert, along with job details and content, will be sent to an administrator for follow-up.

¹ Available in server queue mode only

Xerox® Workplace Suite

Boost productivity and control costs with an easy-to-use, affordable management and mobility solution.

XEROX® WORKPLACE SUITE FEATURES	XEROX® CONNECTKEY® TECHNOLOGY	LEXMARK ESF	NON-XEROX
